

POSTPROCESSOR INSTALLATION

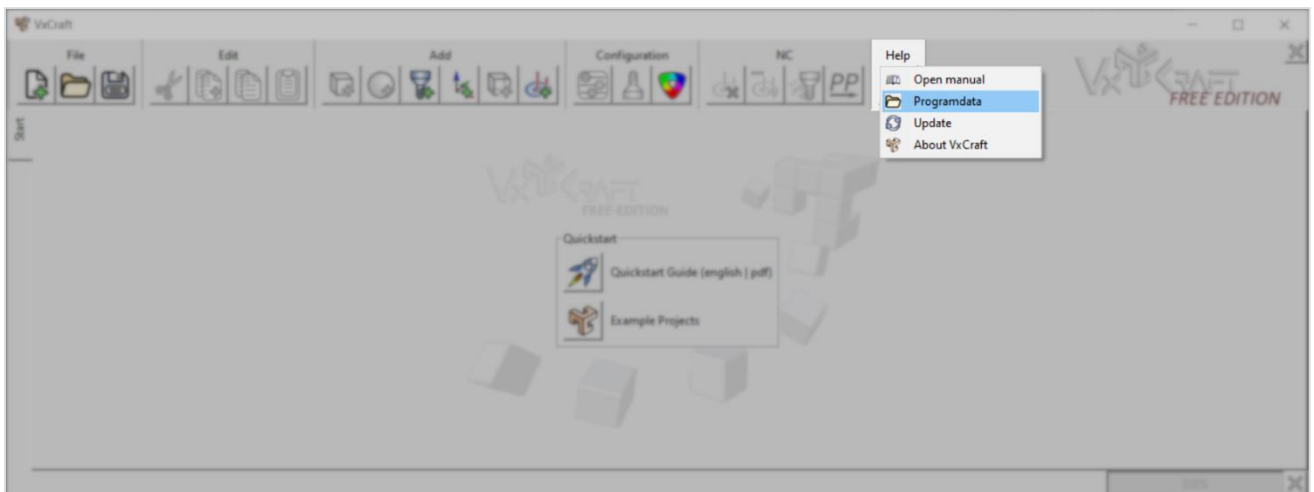

1.) Open VxCraft.

2.) Under the 'Help' menu you will find the 'Programdata' function. Click on it to open the file explorer with the corresponding directory.

Usually the folder is located in one of the following directories:

C:\Users\<Username>\AppData\Roaming\VxCraft(Free)

C:\ProgramData\VxCraft(Free)

3.) To avoid data loss, save the subdirectory "PP" (e.g. simply copy the complete folder and rename it "PP_backup_date").

4.) Now copy the desired postprocessor data (*.lua) from the downloaded zip archive into the subdirectory "PP" of the program data folder. Please note that postprocessors that have already been adapted can be overwritten.
